With camera systems, nets and a deep-sea Robot on an Oceanic / 53 95.141 -304

For sampling, they have what Jan Dierking and Henk-Jan Hoving call the “Swiss army knife of marine research”: the ROV PHOCA, a remotely operated underwater robot that can dive down to depths of up to 2000m, and transmit live, high-definition video from the deep sea to the surface via a fibre-optic connection. It can be configured with a variety of scientific instruments depending on the
