## **Comb Jellyfish recognize their Enemies** **Kiel marine scientists study the immune system of the "sea walnut"**

**27 November 2013/Kiel.** The American comb jelly, an only recent immigrant species into the Baltic, is biologically a very simple organism. It is therefore surprising that the immune system of the jellyfish is capable of learning and recognizing their enemies. This is the result of a study that was recently published by scientists at the GEOMAR Helmholtz Centre
