Invasive Seaweed adopts a smart survival strategy

freshwater plant – fouler interactions in general and for cases of shifting plant – enemy interactions in course of climate change. The project results being novel and exciting and of broad relevance, she hopes to reach out to ecologists beyond her immediate community.

Despite the fact that a rapid adaptation of defense was observed in the current work, the team does not know on which mechanisms (up or down regulation of certain compounds, epigenetic shifts, selective mortality) the apparent fast adaptation of defense of *Gracilaria* is based. Thus, the current research has the
